

Dear Colleagues,

please accept this letter as a part of my application for this geotechnical engineer position.

I am a permanent resident of Canada. I have a strong interest in this position and would like to be considered for this opportunity.

My interest in this position is supported with considerable masters studies of engineering geology and geotechnics at the Charles University in Prague and also with engineering geological (geotechnical, construction) experience gained at PRAGOPROJEKT a.s. (company for designing different constructions, supervision and exploration) and PUDIS a.s. (company for designing line constructions and tunnels, supervision, geotechnics, engineering geology and exploration) both based in Prague in The Czech Republic.

In the present I run a small placer gold mining operation and claim exploration (implementing of several mining and geotechnical designs) in Southern BC.

For the past almost 15 years, I've been studying and working in a field of engineering geology, mining and geotechnics, working on major NATM and TBM tunnel constructions in The Czech Republic, studying and computing few NATM tunnels in The Czech Republic (excavated in soils, weak and hard rocks, 2D, 3D FEM models). I've been also working in exploration (drilling, sampling, writing reports, drawing maps and sections) and solving different foundation systems of different constructions, mostly highways in The Czech Republic.

I am willing to relocate in the near future.

To see bigger picture of my life experience visit please <http://behy.xf.cz>

I look forward to the opportunity to meet with you to discuss my potential contribution.

You may contact me to set up a personal interview by following means:
