

Dear Colleagues,  
please accept this letter as a part of my application for any geological, geotechnical or engineering position.

I am the Czech citizen and I have open work permit valid until 31. Aug 2018 to work in Alberta, Canada. I should become a Permanent Resident of Canada before July of 2018.

I have a strong interest in this position and would like to be considered for this opportunity. My interest in this position is supported with considerable masters studies of engineering geology and geotechnics at the Charles University in Prague and also with engineering geological (geotechnical, construction) experience gained at PRAGOPROJEKT a.s. (company for designing different constructions, supervision and exploration) and PUDIS a.s. (company for designing line constructions and tunnels, supervision, geotechnics, engineering geology and exploration) both based in Prague in The Czech Republic.

I've been deeply interested in mining of polymetals, silver, gold, coal, minerals and rocks since my childhood. I've visited hundreds of open pit and deep underground mines in Europe (mostly in The Czech and The Slovak Republics), which led me to the studies of engineering geology with focus on underground constructions especially. They became my passion.

I've been also visiting a few university courses of theoretical geophysics and practical terrain courses of use of geophysical methods and been occasionally but for several years working like an operator and helper on different geophysical measurings (seismics, geoelectric methods, magnetometry, radiometry). I've been deeply interested in it.

In the present I run a placer gold mining operation and claim exploration in Southern BC.

For the past almost 15 years, I've been studying and working in a field of engineering geology, mining and geotechnics, working on major NATM and TBM tunnel constructions in The Czech Republic, studying and computing few NATM tunnels in The Czech Republic (excavated in soils, weak and hard rocks, 2D, 3D FEM models). I've been also working in exploration (drilling, sampling, writing reports, drawing maps and sections) and solving different foundation systems of different constructions, mostly highways in The Czech Republic.

I have clear driving record. I'm willing to relocate in the near future.

To see bigger picture of my life experience visit please <http://behy.xf.cz>

I look forward to the opportunity to meet with you to discuss my potential contribution.

You may contact me to set up a personal interview by following means:
